

THE RESCUER

2020-2021

PROTECTING ANIMALS AND THE NATURAL ENVIRONMENT

During the past 18 months, we have all come to appreciate how important freedom is to us — both freedom from confinement and the freedom to do as we choose. Many of us have struggled mentally and physically with the impact of lockdowns that have left us bored, frustrated and anxious. And the same can be said for animals that are kept locked up, not just for months but for their entire lives.

It must be torture for a wild animal to be prevented from living and behaving in the way nature intended: unable to roam over vast areas of terrain in search of food or a mate and denied the solitary or sociable life that is its nature. This deprivation is as cruel as withholding food or water from an animal and the mental and physical effects are equally damaging.

At IAR, we rescue animals that have spent so long in captivity that they will never be able to fend for themselves in the wild. They remain in our care for the rest of their lives, enjoying what freedom we can give them while still keeping them safe — and that means freedom from fear and pain and from the misery of their previous lives.

How anyone can doubt that animals are sentient beings that feel pain and pleasure is a mystery to me. You only have to look in the eyes of an animal that has spent years behind bars to see its misery and despair. And conversely, when an animal is released back into its natural habitat, its whole demeanor is transformed from the moment it has its first taste of freedom.

After so many of us have experienced the mental and

physical stress of lockdown, how wonderful it would be if the world as a whole would realize how shocking and cruel it is to keep animals in captivity for no good reason. We are not the only ones to suffer from the effects of being locked up — but we **are** the only ones who can end the misery of those other species whose fate rests in our hands.

No one can ignore the impact of climate change with all the recent floods, fires and disasters happening across the globe. The whole world's eyes are on our world leaders to stop making excuses and act now. The climate has to be at the heart of every decision the world takes from now on.

There is still hope of turning things around. But we must act fast. World

leaders at the COP26 (2021 United Nations Climate Change Conference) summit in Glasgow this year must deliver solutions and actions, nothing less!

The International Animal Rescue team faces the dire consequences of climate change and the biodiversity crisis on a daily basis. We are committed to the conservation, protection and improvement of the physical and natural environment and supporting the development of sustainable ecosystems.

In addition to our rescue, rehabilitation and release work, we are working with local communities and partners to implement holistic programs to protect and restore precious forest habitats, which serve to reduce greenhouse gas emissions, safeguard the environment and tackle biodiversity decline.

As you will read in **The Rescuer**, in the face of the challenges posed by the pandemic during the past year, IAR's teams in the field continued to rescue, rehabilitate and release as many animals as possible back into their natural habitat.

And it was you who made this life-changing work possible. Thank you so very much, as always, for your support.

Alan Knight OBE
President

INDIAN BEARS

THE MOTHERLY LOVE OF ANKITA

In 2017, tiny cubs Maahi and Mithali were found clinging to their dying mother inside a 20-foot-deep well on the outskirts of a village in Karnataka in southern India. It was a miracle the cubs were still alive.

Once at our center, their need of a mother figure was clear, so a decision was made to introduce them to a new foster mom!

A slow introduction of the two cubs to another rescued female bear Ankita was started, in the hope that she would adopt them as her own. As luck would have it, Ankita's maternal instincts kicked in almost immediately and she happily took on the role of foster mom.

Today, the three share an extraordinary relationship, which has only gone from strength to

strength over the past three years. From foraging for food to learning to dig for termites, being cautious of the unknown and climbing trees, Ankita has taught the twins everything. They enthusiastically follow her around, trailing along behind her as she demonstrates how to use their inwardly shaped claws to dig for termites or suck out the insects by using their snouts. The little family, along with many

*Did you know
that today our
sanctuaries in
India still care
for over 200
rescued dancing
bears?*

Other rescued bears, live in the 'Safari' area within the Bannerghatta center, a large open area wild with greenery. There are a number of bathing pools and Ankita and her cubs can often be spotted taking a relaxing dip in them. They love nothing more than frolicking in the cool pool, playing with treat-filled enrichment balls, honey-laced logs and digging up mud pits to nap in!

Bear dancing was a common practice in India for centuries. Sloth bears were caught from the wild and beaten and mutilated to entertain villagers and tourists who would pay to watch the bear 'dance'. In order to 'train' the cub, a red hot needle was used to pierce its muzzle and a coarse rope would then be threaded through the open wound. The bear's handler would tug on the rope to make it stand up on its hind legs and 'dance'. With

the help of our partners Wildlife SOS in India, we have rescued more than 620 dancing bears from this cruel trade — and in 2009 we rescued the very last one!

Since then, thanks to our supporters, we have been able to provide the rescued bears with a permanent home in spacious sanctuaries in India, managed by Wildlife SOS.

PROTECTING ORANGUTANS IN BORNEO

Towards the end of 2020, The District Natural Resources Conservation Agency (BKSDA) and IAR Indonesia rescued two young orangutans being kept illegally as pets. They also translocated a massive wild male orangutan — not once but twice! Without the rescue team, the fate of these individuals would have been a very different and sad one.

Expert care for Covita and Kukur

Baby orangutan **Covita** was being kept as a pet in a remote village in West Borneo. A local man claimed to have found the little infant while working in the forest. He took her home and fed her on rice, cashew nuts, sugary water and sweet condensed milk – a completely unsuitable diet for an orangutan! He kept her in a small wooden crate. Thankfully, a local villager

who knew it was illegal to keep an orangutan as a pet urged the man to surrender the poor baby to the authorities.

When she was rescued, Covita was found to have an injured leg and was suffering from a skin disease that was possibly caused by her

poor diet. Once in quarantine at IAR's rehabilitation center in Ketapang, she underwent tests to ensure she wasn't suffering from any infectious diseases before embarking on her long journey through rehabilitation which we hope one day will lead to her return to the forest.

Five year old **Kukur**'s story was all too similar to Covita's. He was kept in a hut in the middle of the woods and lived together with a family and their dogs, pigs and chickens. A villager claimed to have found Kukur in the forest while he was farming. He said he felt sorry for the orangutan and so brought him home and kept him as a pet. He kept him tied up by a rope around his neck and fed him on rice and other human food like noodles and coffee, as well as some fruit.

Old wounds were found on Kukur's neck and ankles, probably from the rope. At the end of the quarantine period, having been given a clean bill of health, Kukur entered forest school and, after a nervous start, he took to the trees and started to develop the skills and behavior he will need in order to survive in the wild.

IT'S TIME TO ACT NOW!

Between 1999 and 2015, over 100,000 of Borneo's orangutans were lost as a consequence of habitat loss and fragmentation, poaching and wildlife trafficking. Without action to stem the decline, it is reckoned that by 2025, 82% of the population will be extinct. The goal of IAR Indonesia, working in conjunction with the KLHK and the National Park authorities, is to prevent the disappearance of these great apes and other unique species that inhabit Borneo, among them the proboscis monkey and the clouded leopard, through a conservation program in the Bukit Baka Bukit Raya National Park, occupying 200,000 hectares of tropical rainforest of immense conservation value.

KARMELE LLANO SANCHEZ

IS HONORED WITH PRESTIGIOUS AWARD

We are delighted to announce that Karmele Llano Sanchez, Program Director of International Animal Rescue (IAR) Indonesia, alongside local authorities, has been honored with an award from the BBVA Foundation in the 15th edition of their Biodiversity Conservation Awards.

Karmele Llano Sanchez received the award for “taking an innovative and integrated approach to protecting the biodiversity of Borneo and the island’s iconic species, among them the orangutan.”

The BBVA Foundation Awards for Biodiversity Conservation distinguish nature conservation initiatives based on best scientific knowledge and pursuing outcomes of broad and lasting impact. And the Worldwide Award for Biodiversity Conservation was awarded to IAR Indonesia specifically “for taking an innovative and integrated approach to protecting the biodiversity of Indonesia’s Bukit Baka Bukit Raya National Park, in Borneo,” and “various of its iconic species,” among them the orangutan.

“In order to rescue animals, you first have to rescue humans.”

This is how Karmele Llano Sanchez describes the conservation strategy deployed by IAR Indonesia, with particular attention to one of its emblematic, and critically endangered species: the orangutan.

Our rescue center is based in a region with widespread poverty where indigenous communities have no access to either healthcare or education. Initially we confined ourselves to the rescue and reintroduction of orangutans displaced by habitat loss and fragmentation, but we quickly realized that these efforts would come to nothing if we didn’t lend support to local communities.

The impact of education on habitat conservation is not always immediately clear, but it is absolutely crucial.

The majority of families from the communities where we work venture into the national park to undertake illegal activities (hunting and logging), either to pay for healthcare or for education for their children.

To mitigate such circumstances, to date, IAR Indonesia has launched several support programs focused on the healthcare, education and employment of local indigenous communities as a way to halt deterioration of the ecosystem that sustains the great apes.

THE RETURN OF BONCEL

A magnificent male orangutan first made an appearance in a village in West Borneo in August 2020.

After careful assessment of the situation, a team from the BKSDA and IAR Indonesia decided to translocate him to safety in the nearby forest of Sungai Besar. Named Boncel by the rescue team, the great ape was estimated to be between 30 and 40 years old and weighing 60-70kgs. The translocation operation went smoothly but in early November, lo and behold, Boncel was back! This time he was found in a plantation, feasting on pineapples. Once again the team conducted a successful translocation operation, taking Boncel back even deeper into the forest in the hope that this time round, Boncel will stay where he belongs!

HELPING RESCUED BEARS HEAL IN ARMENIA

Last year was, without a doubt, the most difficult year since we started our bear rescue work in Armenia. Battling the impact of a global pandemic, the chilling threat of a war with Azerbaijan looming right on the doorstep and political turmoil and uncertainty in the build

up to the elections in June 2021 which then saw the existing government re-elected — these were just some of the challenges our team on the ground has had to contend with.

However, there have been many positives. All the bears in our care at the sanctuary have gone from strength to strength.

With the ongoing unrest within the country we have made the safety and well-being of all our bears in the center our priority. We made a promise to you as well as to the bears themselves that, once in our care, they will never suffer again and we will do everything in our power never to break that promise.

This winter, for the first time ever, nearly all the bears hibernated which is the best news anyone could ask for. Hibernation plays such an important role in a wild bear's life! Sadly, many of our sleepy bears never had the chance to hide away in a den and sleep: instead they were forced to stay awake behind the bars of a tiny, squalid cage.

MAX

Do you remember the biggest member of our bear community – the gorgeous and majestic Max?

Well, for the very first time in his life he went for a long winter sleep and, according to his caregivers, the hibernation had a hugely positive effect on his behavior.

After waking up, Max displayed natural, 'wild bear' behavioral patterns with significantly reduced stereotypical behavior such as

pacing back and forth and walking round and round in small circles. He was visibly calmer and happier. Max used to swing his body and flick his head around – all the result of living in such poor conditions and confinement for many years. But this year's winter sleep helped him break the pattern and resume more natural bear behavior. It is a delight to see such a change in him – made possible by your generous support for the project. Thank you.

Did you know that Syrian brown bears are the only bears in the world with naturally white claws? Despite their name, these bears can no longer be found in Syria, and now only natively inhabit the mountainous regions of Northern Armenia and its surrounding countries...

BUILDING A FUTURE FOR BEARS IN ARMENIA

Since we launched the Great Bear Rescue in 2017, we have rescued more than 30 bears from the most appalling conditions imaginable.

We now need your help to finish the job we started four years ago by creating a brand new sanctuary for Armenia's remaining captive bears. We have purchased 20 hectares of land in a stunning mountain location just one hour's drive north of Armenia's capital thanks to our

wonderful supporters. Here we will be able to provide a home for all the bears we have already rescued as well as all those bears still in need of our intervention to give them the care they need often after years of misery.

The next stage is to build all the facilities for the new site so that the bears have the best possible environment in which to live the rest of their days, or in some cases, to be rehabilitated back into the

wild where they belong. The site will include a vet clinic, enclosures, staff accommodation, visitor facilities, quarantine area, food preparation unit and vital enrichment, such as wobble trees and pools.

We are asking you to join with us on our journey to see through our promise to rescue all the captive bears in Armenia. Thank you.

PROTECTING WILDLIFE IN COSTA RICA

Costa Rica in Central America contains 5% of the entire world's biodiversity. Its varied, stunning landscapes are home to an abundance of colorful and charismatic wildlife.

The howler monkey, for example, the loudest of all land animals, whose deafening calls can travel three miles through dense forest; and the tamandua — a member of the anteater family — with its tubular snout and long sticky tongue for trapping food; not to mention the endangered jaguarundi, a wild cat native to the Americas. Then there's the delightfully named kinkajou, also known as the honey bear because he raids bees' nests to reach his favorite food.

And let's not forget the Mexican hairy dwarf porcupine with his big dark eyes and stubby nose; the painted wood turtle, the keel billed toucan and the black-bellied whistling duck, to name a few

ORIANA THE HOWLER MONKEY

TORNADO THE PIZOTE

MARIANO THE SCARLET MACAW

CAMPANITA THE BARN OWL

FLUFFY THE MEXICAN HAIRY DWARF PORCUPINE

JOEY THE RACCOON

more, and the pizote, also known as the white-nosed coati, who spends her days foraging on the ground but sleeps, mates and even gives birth up in the trees.

Individuals from all these stunning species are among the many to have been treated and cared for by our team at IAR Costa Rica during the past year. The country's wildlife is highly vulnerable to the threats of our modern world. Not only are they at risk of being hit on the roads, attacked by domestic pets, or sold into the illegal pet trade, they are also severely affected by increasing loss of habitat and, horrifically, the risk of electrocution on uninsulated power cables and transformers.

Howler monkeys in particular are prone to use the cables to travel through areas where trees have been cut down which forces them either down onto the ground or onto the wires. Tragically, where the cables and transformers are uninsulated, the monkeys get horrifically burnt and often killed,

many of them mothers carrying babies. The lucky ones among these little orphans may escape with minor injuries because their mothers' bodies absorb most of the shock. They are taken to our center in Nosara for treatment and rehabilitation so that eventually, with lots of expert, loving care and

some luck thrown in, they can return to their home in the forest and start a new life.

As more and more people discover the attraction of Costa Rica as a holiday destination or a place to set up home and building development continues to keep pace with

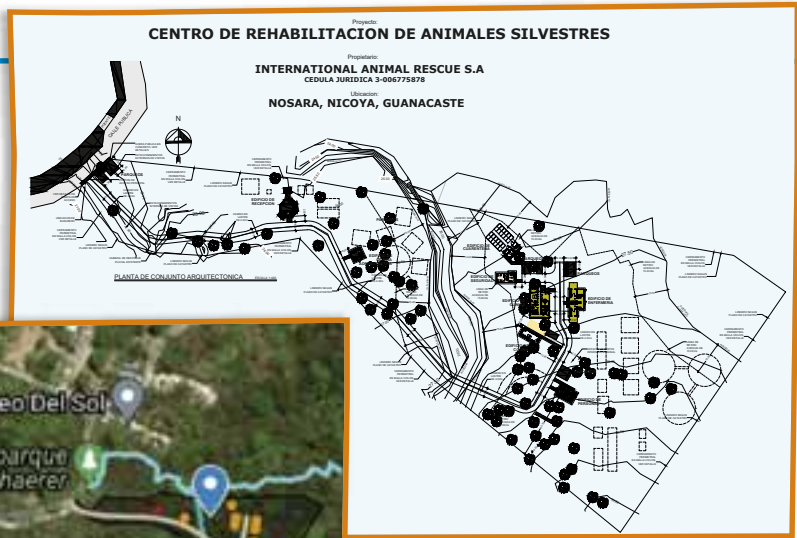

demand, the pressure on its wildlife increases. But, as long as we can count on your help, our team can continue to come to the aid of the honey-hunting kinkajou, the tree-climbing coati and the sticky tongued tamandua – and together we can make a real difference to threatened wildlife in Costa Rica.

REBUILDING THE REFUGE

IAR's existing wildlife rescue center was established by Brenda Bombard over 20 years ago at her home. The project has gradually come under the IAR umbrella during the past few years.

The current set up is less than ideal and the number of animals needing our care has increased considerably. While with Brenda's help, we have made many improvements, the time has come to relocate to a purpose built, properly accredited facility.

Earlier this year we launched an urgent appeal for funds to build a new center which will allow IAR Costa Rica to take in and care for

more wildlife and help with rehabilitation and release work.

We're so grateful to announce that thanks to our supporters and to The Michael Uren Foundation the build phase of our new center is now fully funded! **Thank you for making this project a reality.**

We can now forge ahead with our plans – we have submitted the paperwork to the various authorities with a view to getting the building permits as soon as possible. We aim to start the build after the rainy season towards the end of 2021.

CATASTROPHES

CAT RESCUE

At Catastrophes cat rescue charity in the heart of rural Sussex, England, we aim to provide a safe haven for feral, unwanted and stray cats. Also, many of our calls for help are for cats whose owners can no longer keep them owing to a change in their circumstances.

The last two years have been a difficult time for all of us and our team at Catastrophes have met these challenges and kept the charity stable and ticking along. Post-lockdown has seen a surge in desperate pleas for help needing our immediate response.

Making the cats in our care healthy and happy is vital to our work.

The first line of action for a cat arriving at the sanctuary is veterinary attention. The cat may

have suffered injuries or years of neglect as a stray. Our action list includes attending to wounds, injuries, infections, giving pain relief and diagnosing illness in order to start a treatment regime. Neutering and spaying is vital to prevent unwanted litters.

Of course all this veterinary care costs money but, for an animal's health and well-being, we feel it is an investment for their future. Without the wonderful help of International Animal Rescue, we could not continue to provide our vital lifeline to cats in need.

**Liz Varney CEO,
Catastrophes Cat Rescue**

TEN CRITICALLY ENDANGERED SLOW LORISES

In August 2020 the IAR Indonesia team in West Java transported 10 Critically Endangered Javan slow lorises to the Mount Sawal Wildlife Reserve to undergo habituation before being set free in the rainforest.

During the lorises' habituation, the team continued to observe and record their behavior for several weeks. Happily, they were all active and didn't display any abnormal behaviors, so could finally be released.

The lorises consisted of four males and six females. Most of them had been surrendered by members of the local community to the local Natural Resources Conservation Agency (BKSDA). They then underwent lengthy rehabilitation at IAR's Primate Rehabilitation Center in Bogor. The facility is the only one of its kind in Indonesia.

The lorises' condition when they first arrived at the center was extremely poor. They were suffering from stress, trauma and malnutrition

RETURN HOME

after being caught from the wild and kept in captivity.

The keeping of slow lorises as pets is having a devastating impact on wild populations which are also suffering from loss of natural habitat. So it was a source of great joy for all involved to watch these precious little primates recover and return to their wild behavior and finally return to freedom in the forest.

YOU ARE ALL WONDERFUL!

Thank you to every single one of you who participated in community fundraising events over the past year. We are so grateful for our dedicated, loyal, passionate and determined supporters who were willing to stay by our side throughout such difficult times. **Staying connected with you throughout a global pandemic is one of the toughest hurdles our fundraising team has had to face.** However, you, our wonderful fundraisers, are **UNSTOPPABLE!**

Together, we were able to overcome these challenges and ensure that our projects on the ground had the funds needed to continue saving lives.

CAKES FOR APES

Our annual mass participation baking event was back for April 2021! We introduced some new and exciting digital elements including our online baking competition 'The Great Ape Bake Off' and a livestream baking class with The

Great British Bake Off star Chetna Makan.

Hundreds of our supporters joined us from all over the world to bake cakes and raise vital funds for our orangutan rescue project in Borneo. Asia and Jacob raised a staggering \$662 while Joan Stuart raised over \$1,090! Frances Lethorn, along with the

doctors, nurses, pharmacy staff, porters and kitchen staff at Queen Elizabeth University Hospital in Scotland, rallied together to raise \$1,780 for our beloved orangutans.

This beautiful community of cake and ape lovers alike came together to bring happiness and hope to the future of the orangutan species.

THE IAR DROP

On June 10th, 18 very brave fundraisers took the leap to end animal

suffering. They were lowered from the i360 Brighton's viewing platform, which is the highest descent in the UK. The event was a huge success with the participants raising over \$13,600! Despite the weather being slightly cold and foggy, they still had a magnificent time leaping over the edge and down to victory. **Thank you to everyone who attended and made the evening so special. Please know the funds you raised will go such a long way in helping us save lives.**

COMING UP...

Last year more than 200 super supporters took part in our 'virtual' event; The Rainforest Run. This year, we are ready to do it all over again – even bigger and better than before! As our Rescuer went to press, we are preparing for this year's 5K on September 26, 2021 to help protect precious rainforests, please visit www.therainforestrun.org for more information. **We can't wait for you to join the team next year!**

GET INVOLVED

If you're interested in fundraising in support of our work, then we would be thrilled to hear from you! We have lots of ideas and inspiration and can send you a free fundraising package to get you started. Please email us at fundraising@internationalanimalrescue.org or call us at **(508) 826-1083**.

REMEMBERING RANI

Forced to dance for the enjoyment of tourists, 'dancing bears' have suffered horrific abuse on the hot dusty streets of India.

The torture came to an end when we joined forces with our partners, Wildlife SOS and Free The Bears, to rescue more than 600 dancing bears from the streets of India, ending this terrible practice for good! The first bear we ever rescued from the centuries-old trade was sweet Rani.

She was only five years old and living in horrific conditions. An iron poker had been driven through her muzzle so that a rough rope could be threaded through the open wound. In order to 'train' her, she would be repeatedly beaten and starved into submission, flinching in fear every time her captors came close.

Thanks to your support, Rani was rescued and made incredible progress in battling the demons of

her past. She underwent an intensive rehabilitation process and slowly, step by step, Rani started enjoying life again. At the Wildlife SOS bear rescue facility in Agra, she was gradually completely transformed and barely recognizable as the weak, malnourished frame that had first limped into her enclosure.

Rani enjoyed many happy years at the rescue center until, sadly, she finally passed away in December 2019. She will always be missed but we are happy that she was able to enjoy a large part of her life away from the torture that would have followed her otherwise. Her last years were filled with love and companionship. Her rescue started our journey to rescue all the dancing bears off the streets of India, a journey which has ensured that no bear like Rani will suffer such pain again.

Rani, and the many other bears that have come into the rescue centers, owe their lives to our supporters. Without you, we could never have carried out the rescues or provided them with 24/7 care and a safe haven for life.

Thank you all for being there!

STATEMENT OF FINANCIAL ACTIVITIES

For the year ended

December 31, 2020

The financial summary shown is an extract from the organization's full audited financial statements for the year ended December 31, 2020. The full financial statements were prepared in accordance with accounting principles generally accepted in the United States of America and approved by the Officers. For further information, please contact the Treasurer at the IAR US office address. International Animal Rescue US's auditors are Michael J. Smeriglio III CPA, Cos Cob, Connecticut.

2020 was overshadowed by the coronavirus pandemic, which swept around the globe causing hundreds of thousands of deaths, individual hardship and economic chaos.

All of IAR's projects were impacted by disrupted food and medical supplies and soaring costs. Furthermore, our fundraising plans had to be changed very quickly to take into consideration the lockdowns and social distancing rules. IAR is immensely grateful to all the staff and volunteers at our projects for their tireless efforts protecting animals and habitats in such unprecedented conditions, and to our supporters who have stood by us during this challenging time.

In 2020, International Animal Rescue US generated a small deficit in the year of \$11k. Over \$1.2m of our income was utilized on animal and habitat protection programs and only 13% of our expenditure was used to cover fundraising activity. In 2020, we have invested funds into our captive bear rescue project in Armenia as well as the care of the ex-dancing bears in India. We have grown our orangutan and slow loris conservation projects in Indonesia, with a big focus on wildlife trade prevention and habitat protection. Our orangutan release program has continued to grow with more rehabilitated orangutans released back to the wild. In Costa Rica, local income was reduced by the

pandemic; therefore, we have had to invest additional funds into our howler monkey protection project from IAR US. We hold modest reserves, which cover working capital and financial risk and will be used to fund future animal protection programs.

LEAVING YOUR LASTING LEGACY OF LOVE

Big or small, a legacy is a gift from the heart that will help rescue suffering animals and transform their lives for years to come.

If you choose to remember International Animal Rescue in your Will, your legacy will live on into the future. Your compassion and care for animals will continue to save and support them. A legacy is the ultimate gift of love and trust.

Please call us today for more information and advice or on how to request your 'Leaving a gift in your Will' information package. It's quick, easy, completely free and there is no commitment involved. **Call us at (508) 826-1083.**

Making a gift in memory of a loved one.

Making a gift to International Animal Rescue in memory of a loved one is a very special way to honor and remember them. A gift in the name of a lost loved one – or even in the name of a much-loved pet – not only helps provide care for sick and suffering animals, it can also bring real comfort to the person making the gift.

If you would like to make a donation in memory of a loved one, please get in touch by emailing us at **info@internationalanimalrescue.org** or call us at **(508) 826-1083.**

Thank you.

GIVE THE GIFT OF FREEDOM

Leaving a gift to International Animal Rescue in your Will is easy to set up and will make a world of difference to suffering animals around the world. By choosing to remember us in your Will, you will be part of something incredible, part of an end to animal suffering. You will be a lasting part of the solution. To find out more please get in touch today!
